***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Klomp (6,214,091).

Klomp discloses a method for inhibiting the plugging of a conduit for the transport of hydrocarbon fluids by gas hydrates wherein use is made of a hydrate formation inhibitor component of formula (I):

wherein two of  $R_1$ - $R_4$  are independently normal or branched alkyls having 4 or 5 carbon atoms, two of  $R_1$ - $R_4$  are independently representing organic moieties having at least 8 carbon atoms, A represents a nitrogen or a phosphorus atom, Y represents an anion and wherein at least one of  $R_1$ - $R_4$  represents a moiety:

wherein p represents 0 or an integer of up to 50; q, r, s, and t are 0, 1 or 2 and together are at least 1. See column 2, lines 1-38. The examiner is of the position that the hydrate formation inhibitor of Klomp meets the limitations of the compounds of the claims when substituent X is oxygen and substituent m is 0. The compound of the claims appears to differ by not specifying an anion such as  $Y^-$  as set forth in Klomp. However, the

compounds of the claims are in cationic form ( $N^+$ ) so an anion must be present. Klomp teaches that the amount of hydrate formation inhibitor compound to be used ranges between 0.05 (500 ppm) and 11% by weight, based on the water content of the hydrocarbon/water mixture, which is within the range cited in dependent claim 10. See column 3, lines 4-8. Thus the examiner is of the position that the compounds and the methods of inhibiting corrosion and gas hydrate formation in a mixture of hydrocarbon and water of the above rejected claims are taught by Klomp.
